

Sprint 1 Report, Slug Shop, 10/24/2023

Actions to stop doing:

We need to be better about getting on the same page about what needs to be done to implement a story. We also need to be better about committing our code more frequently.

Actions to start doing:

We need to get better at enforcing code standards. We also need to get better at holding people accountable for the time to get work done.

Actions to keep doing:

We have got the time of the daily standup down to a short meeting with no extra bloat. We are doing a good job communicating when something comes up.

Sprint Stories:

As a buyer or seller, I want only UCSC students to be able to use the website.

As a seller, I want to know what information I need to make a listing.

Spikes:

Learn mySQL, Quart, and React

Infrastructure Tasks:

Setup Quart Server

Setup Skeleton Webpages

All stories and spikes were completed. However, we were not able to add to create the skeleton webpages.

The burnup chart is attached below.
