Release Summary
SlugShop
12/5/2023

Key user stories and acceptance criteria:
1. As a buyer or seller I want only UCSC students to be able to use the website.
2. As a seller I want to make a listing.
3. As a seller I want to be able to see my active listings.
4. As a buyer I want to be able to search through listings.

These are the user stories that we present in order to pass the acceptance test.

Known Problems:
There are a few known problems within the project that we are working on fixing for another release (before the project review).
- The Google Authenticator does not work well. There is currently no way to check if the user is affiliated with UCSC.
- There is no search feature yet. This will be added after the initial release.

Product Backlog:
For our backlog we would like to have:
- As a buyer I want to be recommended items to purchase.
- As a buyer I want to be able to filter and search for items.
- As a buyer I want a way to contact the seller.

Overall, for a future product, we would like to have a marketplace web application that has different ways of accessing the products. We would like to add a way to filter searches and also have a chat so that users can directly message buyers through the application.
